

# 10 reasons why?

## 1. seven year warranty

Austube is the only linear lighting company that offers a full, industry leading, 7 year warranty.

## 2. colour quality

Austube uses Zantium LED boards manufactured by Samsung that have a three step McAdam ellipse with no percentage variations.

## 3. dot free

Austube uses 'polyLED' and 'plexiLED' which is an exclusively designed diffuser specifically for LED linear light boards displaying a dot free appearance.

## 4. thermal management

The 'thermosync' heat management system is designed to keep the LED boards well below the recommended maximum operating temperatures to prolong lamp life whilst ensuring that the Zhaga compliant boards are upgradable and retrofitable at end of life.

## 5. tool-less install

Austube's 'kwik-lock' super fast tool-less coupling has a unique intergrated latch and alignment pins combined with a polarised electrical plug system for quick, error free connection. This process is four times faster than traditional installation methods.

## 6. ripple free

All Austube drivers are 'ripple free' which removes the concern of any negative health effects from any ripple in the light output. The LEDs receive a steady DC voltage signal and the light output remains constant.

## 7. adjustable drive current

Fully adjustable drive current drivers ensure that precise light outputs can be achieved with minimum power consumption.

## 8. high efficiency

The combination of Austube's optic and difuser system allows for a highly efficient ouput ratio delivering maximum lumen output.

## 9. full certification and compliance

All Austube linear light fittings are 100% fully certified and comply with all Australian manufacturing standards. refer <http://www.austube.com.au/the-austube-way/>

## 10. IP rated

Austube is the pioneer of IP rated linear lighting systems and have been since 1998. All fittings have been stringently tested and engineered to ensure they exceed the requirements of the Standards.
